

## Integrative solution for SAP

With i.forensik, INIT has launched a software solution that supports many disciplines of forensic medicine with standard SAP functions. Starting with the acceptance of a case, e.g. a post-mortem examination or laboratory test, through data collection and documentation by doctors or laboratory staff, to the billing of the case. All process steps are mapped without media discontinuity and without duplicate data storage. It does not matter whether data entry and documentation take place online or offline.

The module for qualified post-mortem examinations includes a mobile app that doctors and laboratory staff can use to record their data both online and offline. For the administrators who record the procedures and are responsible for billing, the solution includes SAP masks that guide users through the respective process.

## Standard functions

- Data entry via mobile app
- Online and offline capability of the app
- End-to-end digital process
- Reporting
- Archiving
- Invoicing and billing
- Complete SAP integration and connection to IS-H

## Modules

- Sections
  - Initial post-mortem examination
  - Second or qualified post-mortem examination
- Police service
- Expert opinion
- Toxicology
- DNA analysis
- Violence emergency room

## Technology and requirements

i.forensik uses SAP standard technologies throughout for administration. i.forensik also relies on the Apple iPad for data entry. Nevertheless, i.forensik is open to additional or other technologies.

i.forensik uses SAP ECC and does not require IS-H.
