

## Forms – Increase efficiency with the INIT Cockpit

Printing documents or issuing them electronically as PDF files is a resource-intensive task in the SAP environment. Due to the different technologies used – SAPscript, Smartforms and Adobe Forms – forms exist in a wide variety of formats.

Maintainability and robustness in form development are usually secondary to the goal of rapid adaptability. To ensure that the latter does not fall by the wayside, we have developed the INIT Form Cockpit for you.

Our solution begins with the definition of a company-wide form template and ends with a flexibly configurable cockpit for controlling form content. The INIT Form Cockpit provides you with a wide range of standardised forms from the SAP modules FI, SD, PP and MM, which can be easily adapted to your corporate design and future changes. Form output via email is also integrated into the cockpit.

### Direct control of central form content

- ✓ Body
- ✓ Table
- ✓ Information area
- ✓ Footer
- ✓ Optional texts

Changes  
immediately visible

### Standard features

- Central access to forms managed in the INIT Cockpit
- Extremely easy handling for implementing changes
- New creation using form copy function
- Document preview using 'on-the-fly' print simulation
- Direct maintenance of long texts, logos and translations
- Check routines for quality assurance of text modules
- Versioning of form changes

### Technology and requirements

- Adobe forms
- ECC 6.0

### Technology and requirements

- Simplified form extensibility and
- intuitive operation
- Direct control of central form content from a cockpit
- Uniform design templates definable according to your specifications
- IT workload reduction
